

PureGRAPH®

Graphene nanoplatelet additives

Function

PureGRAPH® is designed for inclusion in polymer and cement composites to provide performance enhancements.

Description

PureGRAPH® graphene powders are characterised by their large platelet size, high aspect ratio and low defect levels. Four product grades are available in lateral sizes¹ ranging from 5µm to 50µm with tightly controlled geometries. The powders are readily dispersed in a range of solvent and polymer media. Batch to batch consistency is ensured through leading edge quality control testing.

Typical Applications

FRP composites, elastomers, plastics, coatings, textile materials, energy storage and concrete. Enhanced fire retardancy of polymer composites.

PureGRAPH® 5

D_{V50}=5 µm | Sheet Resistance³ = <10 Ohm/square | Tapped Density⁴ = 0.062 gcm⁻³

PureGRAPH® 10

D_{V50}=10 µm | Sheet Resistance³ = <10 Ohm/square | Tapped Density⁴ = 0.124 gcm⁻³

Features and Benefits:

- Easy to use and disperse readily in a wide range of solvents, polymer resins, elastomers and water-based formulations.
- Highest purity raw materials and defect free graphene platelets.
- Non-aggregated, easy to disperse powders, which enables significant performance enhancements of many polymer composites.
- Highest performing graphene additives available in tonnage volumes.

PureGRAPH® 20

D_v50=20 µm | Sheet Resistance³ = <10 Ohm/square | Tapped Density⁴ = 0.251 gcm⁻³

Particle Size Distribution¹

Raman Spectroscopy²

SEM Analysis

Typical SEM analysis of PureGRAPH® 20 powders showing non-aggregated, uniform sized graphene nanoplatelets.

PureGRAPH® 50

D_v50=50 µm | Sheet Resistance³ = <10 Ohm/square | Tapped Density⁴ = 0.395 gcm⁻³

Particle Size Distribution¹

Raman Spectroscopy²

Typical Product Parameters

PureGRAPH®	5	10	20	50
Graphene particle size (D _v 50)	5 µm	10 µm	20 µm	50 µm

Availability & Packaging

Samples: 50g - 500g supplied in screw cap containers
Bulk volume: Sealed foil bags packed in boxes.

Storage

It is advised that products are kept sealed and stored in cool, dry conditions.

Handling Information

Please consult material safety data sheet (MSDS) for additional handling information.

1 D_v50 measured by a laser diffraction technique.

2 Raman analysis is a large area average using confocal Raman microscope as per ISO/TS 21356-1:2021. The D and G peaks are representative of intercalated graphene platelets that can be easily dispersed.

3 Four-point probe measurement of a 25 µm film collected on membrane filter.

4 According to ASTM D7481.
